Nice! I can see a little point, but I think if you have too many points the text can become jagged..... Thanks for seeing it anyway. No problem, glad I can help. I did the icon by hand but that was a long time ago. I think a lot has changed since then, but you can still see the 'line' I am talking about. The jaggedness, or lack of, can be improved in Photoshop as I remember all the old channels were not available on Layers, just a number of visible and invisible layers or groups. I do not like the idea of the gray as background (reminds me of the rastafari patch this morning, with that creepy beige thing on it.). It's too busy, and I would not use it as a background as the line is supposed to be the focus of attention as it is the one thing that binds all the pieces together. Maybe the gray pieces could be hidden or semi-hidden, and maybe they could be enlarged with the transform option to make it more 'hidden'. This may mean you have to stop thinking about the icon as one segment as you can end up with the 'jaggedness' effect if all the pieces are too large, and if the piece is too small the broken lines become visible. I think it would be easier to manage if the pieces were layered, like the icons that are on the 'lower right' of the FAQ. The pieces being separate means you will have to move them later on if you want to see the full effect and move one piece would have an impact on the pieces it is attached to as they would all have to change position and size to look the same. I hope that helps, and I hope you try it yourself and explain how it works to your pupils. As I keep getting more and more of these questions, I should try and look up some more answers myself now so I can try and post them with the answers. 1) Don't you have to flatten your layers before you make a final version? If I double click on an individual piece, I can see how each piece connects to each other,
