[Proposals for the development of a better in-hospital monitoring system of patients with chronic obstructive bronchopulmonary disease]. After describing the current method of in-hospital monitoring, the authors stress the problem of measuring specific indicators for observing the state of patients with chronic obstructive bronchopulmonary diseases. The authors present data from statistical analysis of the records of the patients in the pulmonary ward at the Clinical Center of the N.N.Bukharsk Polyclinic for the period from 1986 to 1996, as well as the results of the examining of the above-mentioned patients at the end of hospitalization. The authors propose to develop a better method for observing patients with chronic obstructive bronchopulmonary diseases based on the following criteria: (1) to employ simple, easily understandable, and reliable systems for recording and evaluating the patient's state; (2) to take advantage of electronic methods of treatment; (3) to make use of the most adequate data processing methods for analyzing the data; and (4) to create a complex of treatment programs that will ensure the correct course of treatment in each patient.Q: What would a  $SU(2) \times U(1)$  quantum field theory look like? By a  $SU(2) \times U(1)$  field theory I mean something where the fields  $\Phi_{ij}$  have indices  $i, j \in \{1, 2\}$  and  $SU(1)$ -charges  $\pm 1$ . So if I would use the normal conventions,  $\Phi_{ij}$  would be a  $2 \times 2$  matrix. There
