Studies of human bronchoalveolar lavage (BAL) have failed to demonstrate the presence of IgM and IgA. The goal of this study was to determine if IgM and IgA are produced by the human lung. Bronchoalveolar lavage fluid (BAL) from normal human lungs was assayed for IgG, IgA, IgM, albumin, and protein by radial immunodiffusion, protein electrophoresis, and enzyme immunoassay, respectively. IgM, IgA, and albumin concentrations were similar in tracheal lavage fluid (TLF) and in BAL. BAL protein concentrations exceeded those of TLF. Immunoreactive albumin was also found in BAL. The presence of IgM, IgA, and albumin in BAL was confirmed by analysis of BAL fluid recovered by centrifugation and subsequent reinfusion into the same lung. Tracheal lavage fluid from the same donor was recovered by saline suction through the trachea. IgM and IgA levels were threefold greater in tracheal lavage fluid than in BAL. Immunoreactive albumin was not detected in tracheal lavage fluid. Our findings demonstrate that IgM and IgA are produced in the human lung. These results suggest that the airways of the human lung may not be an isolated compartment in the immune system. Q: How to avoid negative numbers? Good day, I'm having trouble with displaying the sum on every page. Heres the block where I'm referring to: It works fine, but If I have more elements in the table, each one has its own sum. So I'm just wondering, how should I avoid the negatives or do something special when there are no items? I'm trying this (which is not working), and this doesn't have to have any SQL for me to be honest.
