after i uninstalled and re-installed the game, i tried to copy / use the same settings and addons as before, but it didnt work. i have tried playing on various settings, including relogging but nothing helps. the game just doesnt show me the game menu/options. this goes even though all settings have their own tooltips that tell me what to do. i think one of the addons is causing the problem as it is playing fine, but theres no menu to turn it off and enable the ingame menu in console (only the settings menu is working) does anyone have any idea how i can fix the menu/options? thanks i have never seen this happen with any other game. for the last few months i have been getting a black

screen when i start halo. the game starts up, but the main screen and the menu just show black. i can't do anything, and i can't play the game. i do have a controller hooked up though, and i can use the settings menu to change settings and stuff. this happened after a restart, and im using windows 7 home edition, and a 4 gb amd r5 3945 intel gma x3100 8gb ram my graphics driver is amd/ati proprietary and factory default (i tried to follow the instructions in this thread but nothing helped: <https://www.rp-server.com/forum/showthread.php?64301-help-after-restarting-nothing-works-on-halo-campaign&p=1099803>) p.s. the graphics settings in device manager dont show anything unusual.. i have a dell vostro v131 laptop running windows 7 home premium. i am in the process of getting some mods for halo 4. i just got the game and ran it on the latest patch for windows. the main menu will not pop up. the game starts, and plays, but the main menu and weapons are blank, and there is no counter. can anyone help?? 5ec8ef588b
