"KEYMACRO is a quick and simple tool that will open any locked file without password. You can also change it if you prefer to have the file's password activated. With KEYMACRO you can: 1. Download and decrypt PDF files 2. Unlock password protected ZIP archives and ZIP files 3. Decrypt passwords stored in files or inside passwords 4. Decrypt files from email links and online backups 5. Set a new password for any file 6. Open files without displaying password boxes 7. Open hidden files 8. Use your own personal passwords that work with KEYMACRO" KEYMACRO License: Freeware KEYMACRO Requirements: Operating System: Windows Vista, 7, 8, 10 (32 or 64 bit) Windows XP (32 or 64 bit) System Requirements: Windows XP, Vista, 7 or 8 Key generation settings: Custom (for each file): a. Type the original (or new) password: b. Type the original password a second time to validate: c. Check the warning: "Warning! This file is protected by an unbreakable password" You can also select the "Auto" setting, which allows the user to specify the exact type of encryption to be used. The "Auto" setting automatically detects which type of encryption has been used and proposes the corresponding settings. KeyMACRO Features: KeyMACRO can generate keys using all of the algorithms listed below, provided that your operating system supports them: • SHA1 • MD5 • DES • 3DES • AES • RSA • OpenPGP It's also possible to automatically create AES keys if none are present. A list of known file types can be used as a basis to detect which file format is being used, and accordingly the key can be generated. File types can be grouped together and the number of files of a given type can be limited. By default, all of the files of a given type are removed if their size exceeds a specified limit. An auto-updating feature can be used to obtain the latest version of the software. There is no specific limitation regarding the number of files that can be stored in a given directory. The file list is refreshed every time the application is launched. The window of the decryption process has a certain transparency, so the user doesn't have to wait for it to load. Keeper Desktop [Latest 2022]

If you have the need to manage a large number of records, it can be advisable to use a software that helps you organize and store the data in a single location. Keeper Desktop enables you to build a vault where you can create folders for storing information. It is essential to avoid making the vault a random collection of files in your computer, as this can compromise your data. The software comes with a smooth and user-friendly interface. It has a collection of functions that enable you to open, modify, delete and retrieve files stored in your vault. It also features a password protection that enables you to protect your files with ease. Let's take a closer look at how this application works and its features.

Create folders and files To manage your vault, you can start by creating folders where you can organize your information. It is possible to type a name into the folder field and you will be able to create the folder and populate it with information by just typing the data in the respective fields. You can specify the information to be stored, including titles for folders, login names, URLs, passwords or files, type a brief description or select a different image to be used as the icon.

Protect data You can turn to Keeper Desktop to manage the protection of your files. You can specify different access levels for the different folders and files. To do this, you have to set the permissions. You can also encrypt records with the help of the password protection mode. This can be used if you do not want anyone to see the information that you have stored in the vault. Instead, you can simply use the decrypt function if you have forgotten your password.

Backup, restore, export and import records You can perform a backup of all the files and folders by simply clicking the Backup button. This will enable you to create copies of the data in the vault. You can specify whether you want to store the backup on a local drive or a remote server. The exported files will remain password protected. Alternatively, you can restore a backup by typing the source URL. Backup copies will be created directly from the source. It is possible that your records will be encrypted and you will need to provide the password before decrypting them. Furthermore, you can export a record as a text file, a PDF file or an Excel file. The resulting files will remain encrypted. You can also import records from text files. The program offers versatile functions and it can be a reliable and trustworthy solution to protect sensitive data.
