Paid apps are a little bit more expensive than the free ones. That's true of *all* the apps I use. In fact, I am now using the paid versions of Apple's iPads, Apple TV, Apple Music, Netflix, the Kindle, Kindle Lending Library, Amazon Prime, and Audiobooks; and the free iOS 11 versions of Instagram, Google Photos, YouTube, Facebook, Bing, Apple Maps, Pinterest, and Skype. Other paid versions of apps I use include Amazon Fire TV, Google Photos, and Amazon Kindle books. I believe using the paid app versions makes good financial sense, because I get all the features I need and I can buy additional features for a nominal price. (For the record, I sometimes use the paid version of iMovie, too.) A big adversary to paid apps is that you're not always sure what you're paying for, which is often not available in the free version or a version you can try first. It's a bit like shopping for new clothes in a retail store. How can you feel secure about the purchase, or find out what you're getting for your money, if you can't try a longer version of the product first? It's the same concept: You pay to learn for two hours, but you don't know how your motorcycle will react during the next two hours if you don't get to see it in action on a road test. I have good news and bad news for you about this app. First, the good news: There are **some** things in the free version that are not available in the paid version. "Even Big Brother releases smaller apps," I wrote, though I was referring to Apple's own media player and video streaming platform. Luckily for me, those are just the apps I use the most. I rarely use Apple TV or Watch, and I don't use the Kindle. Even if I do, however, the free version is still good enough for me to use. I do understand if you have a higher comfort level with an app, if you don't like the idea of using a free app by companies you do like. There's an escape hatch: If you have an iPhone, you can shop around for a free version of these apps you do favor. The downside to this isn't so much that you're giving away your money to developers. It's that you may need to do some of your own research to find out if you REALLY need a free app that has some missing features. Some people like free but have a higher comfort level with a paid app (that is, the free one). That's okay, too. Another good caveat: You may find that you just want to reconsider an app you already own and pay for. When choosing between the two, the free one can often replace the paid version, if it's **a better fit**. It's not always a wise decision, however, to purchase an app over and above a relatively new version which costs nothing, but a fully upgraded version will cost you a lot of money.

With only a few tens of pixels, the images we use in our daily lives are usually unimpeachable because of the slight imperfections, reflections, and dust on the sensor, the slight imperfections in the paper for printing, and the ability of the paper and printer to make them look their best. For the rest of us, photography, food styling, graphic design, and illustration are areas of art where we must turn to the pros—photographers, photo editors, graphic designers, and art directors. In addition to the more-advanced capabilities, there's also the fact that Adobe Photoshop is something which is built in as part of the Adobe Creative Cloud, and as I'm sure a lot of you are aware, using Creative Cloud is pretty much the best way to get what you're looking for.
