## Vestel 17pw20 1 Smps Schematic Diagram A

Vestel  $17pw20\ 1\ 17pw20v1\ PSU\ A\ -1\beta$ , and IL-6 in the third trimester of gestation and at term. Thus, our data suggest that maternal obesity alters gene expression of pro-inflammatory cytokines in placenta during pregnancy. Another important finding of this study was the alterations of cytokine expression in macrophages. Our data showed that obesity led to significantly higher expression of IL-1 $\beta$  and IL-6 in mps isolated from placenta at late gestation and at term in comparison with mps isolated from control group. IL-6 and IL-1 $\beta$  are well-known promoters of the recruitment, maturation and activation of monocytes/macrophages. IL-1 $\beta$  and IL-6 have been implicated in the differentiate into anti-inflammatory M2 macrophages. However, IL-1 $\beta$  and IL-6 are also known to act as "double-edged swords", in that they can induce pro-inflammatory M1 macrophages \[[@pone.0186239.ref036]\]. This finding of higher expression of IL-1 $\beta$  and IL-6 in placenta isolated from obese pregnant mice is in agreement with other studies that have shown increased expression of pro-inflammatory cytokines in placenta \[[@pone.0186239.ref021]\]. Alternatively, Chen et al. showed that IL-1 $\beta$  and IL-6 inhibits the phagocytic function of macrophages, and this observation was attributed to blocking of the receptors for these cytokines on monocytes \[[@pone.0186239.ref037]\]. Therefore, an abnormal expression of cytokines such as IL-1 $\beta$  and IL-6 in placenta has the potential to inhibit efficient uptake of placental macrophages. In our study, the expression of IL-79a2804d6b
