Go to the View menu, and choose "Grid and Guides". Hit the letter **G**, and see what happens. (Unfortunately it's not apparent at all what happens when you hit the **P** key because the default setting is to partially hide the Guides. Go to the Layer menu, and choose "New". Now check **Information**, and you'll see it has recognized what you're doing! Your work has no name, and also no alpha channel, so in most cases your work has no unique color. This is similar to how it works with Photoshop 8, only where alpha was not a separate layer before, now it is. Your work will be in the **Windows** layer group, and you can use the **H** or **L** key to move it into a different group. You can name layers by clicking the **N** key. Now open a new pallet with the ever-useful tool in the pallet menu, **Create"**. Go to the palette menu, and choose **Rectangle**, or the handy tool icon **"R"** in the palette. What It Does: The Brush tool is a big deal in the content creation world. It's the versatile, freeform tool that can be used to add interesting textures, objects, and layers of content into photos. The brush tool is a perfect tool for adding dimension to your design and changing the scale of your content without having to crop in Photoshop. The concept of having an application run directly in the browser was first explored in the X Window System (X11) by Steve Jobs and his crew at NeXT in the 1990's.
Adobe brought that concept to the forefront a few years later with Adobe Flash.
Adobe subsequently forked Flash to develop its own web browser technology, Adobe EdgeHTML, and soon after released the technology to the world.
Later, Adobe acquired DeGrish's Edge browser team and used that technology to develop the current incarnation of Google Chrome.
Today, Adobe is taking the next steps in this technology by bringing Photoshop to the web.

Now that we have a look at what Photoshop is, let's take a look at how Photoshop came to the web. This is the heart of the matter. You could be working on an awesome design and be viewing it in a browser that doesn't support web standards. Or, you could be working on a website and not be using any sort of photo editing software. *Nabeel Al-Shamma* explains how all of this helps.
