If you're looking for how to use practical software to create flash in your software, this chapter, being the first chapter in a guide will be sufficient for you. It would be a useful chapter so that you can learn and start your design project. If you have no idea what flash is, then you are the perfect audience for this chapter. The author will guide you through Flash professional CS6 to create the basic building blocks of a professional, interactive and immersive flash story. Flash is a computer program that's written in the.SWF (Shockwave Flash) file format. When you visit a Web site that has a Flash site, your browser plays that Flash file in order to display it. Speaking of brushes, Photoshop now features a new set of Brush Controls that give you more flexibility in selecting your brush, using new shape controls, including being able to select your brush shape with the Ring Brush tool. Many of us use Photoshop for only a couple of things. However, it has the power to do a lot, and with a learning curve, not all that difficult to master. There's no doubt that in the past the files you uploaded into the software were fairly clunky, with huge file sizes. However, with the new features announced at the Adobe D and community event in San Jose, the files uploaded to the software are staying small with plenty of functionality. The new features that Photoshop announced at the D conference include: Layer Flatten, Layer Collapse, Merge Visible Layers, New Layer Masks, Layer Group, Pasting Transformations, and the new Brush Controls that provide a lot more functionality. The most exciting aspect of the new features announced for Photoshop, is the ability to merge layers to save space and work with smaller files. One of the biggest problems in previous versions of Photoshop was that the file size would grow and grow as you worked. This in turn sucked up valuable space on your hard drive, and decreased the number of files that could be loaded onto a smartphone (not to mention other smaller platforms). Utilizing the layer flatten functionality, you can merge the layers of an image into a single layer by simply clicking on the layers and then flattening them.
