Stick For Download 28. Efficacy of a two-stage  
medical device to improve the outcome of spontaneous  
perineural-peripheral nerve-lumbar pain. Prospective  
case series. The aim of the study is to assess the  
efficacy of the "Kinder Credense®" three-in-one valve  
system in patients with lumbar facetogenic, lumbar-  
radicular-sciatic (LRS) or spontaneous perineural-  
peripheral nerve-lumbar pain (SpPPN-LBP). SpPPN-  
LBP is a subgroup of lumbar pain syndromes,  
characterised by wide and apparently harmless  
defined impairments in the nerve. A three-in-one valve

system, Kinder Credense® , was designed to improve the outcome for patients with SpPPN-LBP. Moreover, pain reduction through an epidural block of the dilator muscle of the rectum (DPBD), with bupivacaine 0.75%, has been proven to be effective in these patients. However, data on this three-in-one valve system in patients with SpPPN-LBP is lacking. Fifty-one patients with SpPPN-LBP were treated with an epidural block of the dilator muscle of the rectum
